

MEMORY GAME

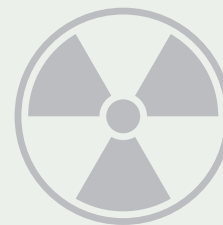

TOXIC WASTE

MEMORY GAME

You have reached the animal research station. Here, you are tasked to play a memory game that will help you to learn more about the animals of the area. For the animals here to stay healthy, the plant life must be healthy too. The ecosystem needs to be balanced. If there are lots of weeds, the native plants can't grow and then the native animals suffer.

TOXIC WASTE

An unfortunate event occurred recently where a truck overturned on the Great Ocean Road and toxic waste was spilt. As everything leads to waterways, some of that waste has ended up here in the estuary. Your task is to transfer the waste into the holding bucket using the equipment provided for effective disposal. It is vital to dispose of this waste and rescue the mother kangaroo who has become very unwell from drinking contaminated water.

Take your time!
Everyone must help out.

GOOD LUCK TEAM!!!

You have 15mins to complete
